

DIME™
INDUSTRIES

MADE FOR EACH OTHER

DIME carts and batteries
work best together,
producing the perfect
temperature for
a unique high.

Think

Higher™

TROUBLESHOOTING

For the best performance of Dime Vapes, please see below:

- Refer to the instructions on the box before using your Dime Vape
- Ensure you are using Dime carts with Dime batteries; these are engineered to work best together
- Dime carts will not work with inhale activated batteries; we recommend only using the Dime battery
- Ensure airways are not covered by hands for the best experience
- Carts that are overtightened on batteries may not have the best connection; try and loosen your carts if you are experiencing issues
- Dime batteries come with a pre-heating setting; we recommend using this to create the right amount of heat
- Holding the button too long can cause too much heat, once the vape is at the correct temperature; we recommend letting go of the button
- In some cases, a strong haul might be required, specifically on first draw
- Store your Dime Vape upright when at all possible, and avoid exposing it to extreme external temperatures
